More details

Secure communication channels for the customer's hardware-and-software video processing platform — more than 250 sites:

coordinating connections, working with telecom operators and contractors, organizing endpoint equipment installation, monitoring video-stream delivery and project deadlines.

Secure network — more than 40 sites:

delivering connectivity over operators' own and leased infrastructure, upgrading capacity, and organizing joint technical surveys.

Corporate connectivity services — 50+ sites:

providing Internet access, communication channels, and telephony services, coordinating telecom operators, and overseeing service delivery for corporate customers.

Skills

Project coordination Task planning · Deadline management · Prioritization · Contractor coordination · Customer communication · Escalations	Technical foundation TCP/IP · DHCP · DNS · NAT · VPN
Tools Jira · Microsoft Office · Google Workspace · AI tools	Soft skills Systems thinking · Responsibility · Communication · Multitasking · Solution-oriented approach · Self-directed learning

My Goals

- Deepen my networking knowledge through the CCNA curriculum and earn the CCNA certification.
- Gain practical skills in configuring networks and network equipment.
- Learn Linux administration.
- Develop technical support skills in fault isolation and troubleshooting.
- Learn Python and apply it to automate work and technical tasks.
- Move into a more technical role in infrastructure, networking, or system administration.
- Improve my English to a confident B2 level.
- Learn Serbian from scratch to conversational proficiency.

Education and development

Far Eastern Federal University Coursework in Economics, Accounting, Analysis and Audit · degree studies not completed	Self-directed learning CCNA networking curriculum, Python fundamentals, and English language studies.
